

Deliverable 1: PlaytestScript.pdf

1. Setup & Preparation

- **Version:** Use the latest stable version of the project.
- **Anonymization:** Do not record play tester names, emails, or other personally identifying information.
- **Recording:** Open a document for "Think-Aloud" notes to capture real-time feedback.
- **Timer:** Prepare to record the time taken for each level completion and the total playtest duration.

2. Scripted Introduction (Spoken to Playtester)

"Hi! Thank you for helping us test **DeadEx: Dungeon Explorer**. We are testing the game's design and mechanics, not your personal skill.

Please do not feel pressured to give us high 'grades' or positive feedback just to please us; we need your honest perspective to improve the game.

Please use the **Think-Aloud method**: narrate what you are trying to do, what you expect to happen, and any moments where you feel confused or excited. There are no wrong answers; your feedback helps us identify areas that need further refinement."

3. Administration Steps

- **Initial Discovery:** Allow the player to start the game without providing any instructions regarding controls.
- **Assistance Protocol:** Do not explain controls unless the player explicitly asks for assistance or is unable to progress.
- **Level Progression:** Once the player completes the first level, the administrator may manually move them to the second level to continue the test.
- **Observation:** The administrator must take detailed notes on the player's "Think-Aloud" commentary, specifically focusing on how they learn new skills.
- **Data Collection:** Record the amount of time it takes for the player to complete specific actions and levels rather than enforcing strict time limits.
 - Leaving the first room (the ghost room)
 - Crossing the gap
 - Completing Level 1
 - **Reset the Timer**
 - Starting the Maze
 - Completing Level 2

4. In-Software Game Event Logging

- **Efficiency:** Record the specific time taken to complete each individual level.
- **Engagement:** Note how many optional stamps were collected versus ignored.

5. Post-Session Debrief

"The playtest is now complete. Please fill out the following questionnaire. Your data will be used to create action items for our next development phase."
